# Branimir Dolički

AI Product @ Munich Re | ex-Google  
Munich, Bavaria, Germany

## Summary

Over two decades building products that bring impact for business, value for customers, and joy for users, including 11 years at Google.

My physics background gave me an analytical, evidence-based, quantitative mindset. As a full-stack developer, I learned software engineering in all its complexity. Working close to customers and business taught me that technology only matters if it delivers impact.

As a Google product manager, I shipped multilingual, global, multi-platform products. I learned to craft product vision and strategy, run product discovery, and plan with measurable outcomes.

Beyond Google, at Lyft, Kaia Health, Taktile, and Munich Re, I learned to establish impact-driven practices across radically different contexts: from startup to enterprise, from autonomous vehicles to healthcare AI.

---

## Experience
